

Refurbishment of existing warehouse and packing area for Airberg limited, a valued customer in Crowborough Sussex.

The Project consisted of a complete strip out of existing Distribution boards and Electrical services to enable new Mezzanine flooring installation.

The installation consisted of Lighting & small power outlets to upper and lower levels of the newly installed mezzanine floor and adjacent area.

New Three phase distribution board was installed with individual MCB/RCD protection for all small power & lighting final circuits.

Installation of new wall mounted PVC Dado Trunking to perimeter walls with steel cable trays throughout all areas above the ceiling for small power cabling, lighting, fire alarm and Data communications cabling.

Installation of surface mounted metalclad socket outlets to central support columns for individual work benches.

A new single pole lighting socket outlets with local switches to individual areas were installed above ceilings to provide connection to new Plug & Play LED Luminaires to lower level and individual lighting socket outlets to upper level for suspended LED batten luminaires, Emergency lighting was also installed throughout all areas.

The Fire alarm system was upgraded with a new protection Zone to provide addition smoke detection coverage to the newly created area below Mezzanine floor.
